Abstract of JP2002278153

PROBLEM TO BE SOLVED: To provide an electrostatic charge image developing toner excellent in fixability and less liable to cause contamination such as filming on a photoreceptor. **SOLUTION:** In the electrostatic charge image developing toner containing at least a styrene resin and a colorant, the highest molecular weight peak of the styrene resin is in the range of 40,000-150,000 and the resin has no molecular weight peak in ranges of $\leq 40,000$ and $\geq 150,000$. The toner contains a wax having 55-145 deg.C melting point.
